smart Lexi

PERFECT FOR: High-quality live streams | Broadcast

Our groundbreaking semi-automated captioning solution Smart Lexi™ uses the power of our human curation layered onto Automatic Speech Recognition (ASR) engines to deliver significantly better results than standard automated captioning products.

Its semi-automated design means it is about half the price of Premium Captions, while still maintaining high accuracy.

ACCURACY

Smart Lexi has been independently audited using the viewer-centric NER* system. The audit determined that our Smart Lexi captions consistently outperformed captions from an 'out-of-the-box' automatic captioning product, with our Smart methodology reducing recognition errors.

- About half the price of Premium Captions
- Human-curated by Ai-Media's expert team
- Groundbreaking accuracy in the automatic captioning space
- Flexible on-screen formatting
- Strong delivery of technical language and difficult names
- Fast turnaround services for post-event transcripts
- Can be accessed from any Ai-Media or EEG encoder
- Fast caption display times

*The NER Model is an independent accuracy auditing methodology.
