Your Language Service Provider

Ablio is a specialized supplier of language solutions and services.

Founded in 2015 in Rome, Italy, with branches in Europe and in the United States, Ablio helps clients of all kinds to communicate successfully in the languages of their audiences through high quality translation and interpretation services.

Ablio operates by applying rigorous standards of practice, ethics and security policies, always placing the human factor at the center of its solutions.

Its team is composed of experienced managers, innovative software engineers, highly qualified interpreters and linguists, where technology and human experience converge to create the best language services. effective and easily accessible to all.

Giulio Monaco – Ablio, CEO

On behalf of the entire team, I would like to welcome you to Ablio. We believe that our experience, exceptional quality of service, cutting-edge technologies and efficient management processes are perfectly aligned with your needs.

As President of Ablio, I am personally committed to ensuring continuous collaboration and accurate execution of all your multilingual projects.

Our Services

We serve clients in any industry and any country with a full range of language services and tools, supported by our community of interpreters, translators, resellers and partners:

Conference Interpreting

Turnkey simultaneous interpretation services for events of all types

Consecutive Interpreting

Consecutive and chuchotage services, on-site or remote

Text Translations

Translations services of any kind of text and document

Localization & Post-production

Web site localization services, captioning, subtitling, voice-over, AI interpreting

Our Interpreters and Translators

Our services are provided by a pool of professional interpreters and translators, accredited after completing a careful evaluation and selection process.

We have over **2,000 accredited interpreters and translators**, under the direction of the Language Pool Director, coordinated and managed by 4 Supervisors, 10 Project Managers, 30 Platform Operators for remote services and 25 Chefs d'Equipe for in-person services.

All our procedures, methodologies and processes for the recruitment, qualification, management and assignment of interpreters to each specific service are conducted in accordance with our Quality Management Manual, verified by internal and external audits, management reviews and continuous monitoring of the quality objectives.

All accredited interpreters assigned to any interpreting service have mastery of the language combination with ISO classification A or B.

All our translators are subject matter experts, professionally trained and qualified native-speaking linguists.

Service Management

The management of each service is handled by a dedicated team, which assists the client in its planning and proceeds with its organization and execution based on specific needs.

- Upon receipt of the order, the details of the service are entered into the Service Scheduler and sent to the appointed interpreters and/or translators.
- In events managed remotely, the Technical Operator manages the service platform and monitors the execution of the service. In events where the interpreters operate in person, the Chef d'Equipe takes care of the organization and coordination of the interpreters on site.
- Each translation file goes through a translation and review process by two separate linguists. If DTP or other post-translation processing is required, the files are moved to the related specialists and subject to a final check by the project manager before delivery.
- Debriefing sessions are carried out by the work team at the end of the service with the drafting of a report. Any deviations from the quality standards are reported to the respective managers.

Quality

Ablio holds the ISO 18841:2018 Certification, the industry-specific standard for quality management in the performance of its interpreting services.

Our Operating Standards, part of this certification, constitute the company guidelines relating to the life cycle management and the professional conduct of staff and interpreters.

These standards reflect Ablio's clear commitment to ensuring the reliability and quality of its service levels.

Our Platforms and Technologies

Multilingual communication doesn't have to be necessarily complex and expensive: we use technology to make it simpler, more effective and convenient. We have developed our platforms using the most advanced technologies to provide language services accessible to anyone, anywhere and for any need.

Ablio Service Platform

Tools and applications for the optimization and automation of internal processes.

From the Event Simulator for the evaluation of interpreters to the Scheduling for the planning of services, up to the automation of payment processes, our Service Platform reduces the usual management and project management times and costs, allowing us to offer quality services at low costs.

Ablioconference – Remote Simultaneous Interpreting Platform

Simultaneous Interpretation Platform, for in-person, virtual or hybrid conferences and events of any kind and size. Full management and control of the entire service flow by the operator.

Multiple listening options: mobile or web apps, multilingual video streaming and plug-ins into third-party applications.

It works in conjunction with any videoconferencing platform. On-site event participants listen to the translation from their smartphones or tablets, eliminating the need to use traditional and expensive simultaneous translation systems.

Available as a turnkey service or self-service platform in SaaS.

Ablio OPI – platform and services

OPI and Remote Interpreting Platform for conversations and call-center services: the users are connected with the interpreter and their counterparts via the Internet or telephone, in self-service mode.

Multiple management and control options via web dashboard.

The simplest and most efficient way to communicate with people who do not speak the same language.

Translation Tools

Our Translation Management Software (TMS) streamlines the workflow of the entire translation process. Different tracking, reporting, and collaboration features allow teams to manage translation projects, monitor progress, and keep up with the deadlines.

Computer-assisted translation tools (CAT) help translators work more efficiently by providing features like translation memory, glossaries, **automation** of repetitive tasks and integration with other tools, ensuring seamless content updates and efficient handling of large volumes of text.

Ablio AI interpretation

We use state-of-the-art AI tools and technologies – generative AI, LLM, MT, ASR, TTS – to produce high quality simultaneou interpreting services and to assist our teams in the localization, translation,, subtitling, captioning, voice-over and post-editing services..

Interpretation equipment

Full service provisioning of any simultaneous interpreting equipment for events in any location, executed through our global network of service providers.

Our Clients

Our customers love us because we serve them with passion and dedication, offering them quality services at reasonable prices. Our reputation is fundamentally made up of them: for this reason we present you a short selection of some references, published with their permission, who can provide you with their testimonies on the goodness of our work.
