- FlightsLogic has utilized the rising demand of the travel business to redefine the distribution system involving all the core parts of airlines and also the ancillary products.
- We are alright known for paving the path for the growing need for travel commerce which includes tour operators.

- We are alright known for paving the path for the growing need for travel commerce which includes tour operators. With the vision of remodifying the travel global system integration with each passing day, we have maintained our domain experience in the travel business, which has helped us to stay the highest GDS system integration in the travel domain all around the world.
- One of the most necessary examples of the hassle created by FlightsLogic to stay because the leader of global distribution system integration is that the initiative taken to design the B2B payment technique, that was one of its kind in the history of travel domain.
- The B2B payment solution was the solution to any or all awaiting demands of the travel intermediaries to accomplish the travel transaction firmly and safely.
- What makes FlightsLogic dominant among the GDS suppliers is that the efficiency with that it accomplished its further services like advertising solutions.

- Information services for business intelligence, services for subscription and providing analogical marketing tools for all travel agencies, travel information users and travel suppliers.
- Galileo GDS traces its way back to 1971 when United Airlines created its 1st processed central reservation system under the name Apollo.
- Throughout the time in the 1980s and early 1990s, a large proportion of airline tickets were sold by travel agents. Flights by the airline owning the reservation system had a special show on the computer monitor.
- Because of the high products of the GDS systems, that is in hand by American Airlines and United Airlines, severally, Worldspan and Galileo were created by alternative airline teams in a shot to get market share within the computer reservation system market, by inference, and also the business airline market.

- Galileo GDS was created throughout the year 1987 by 9 European countries. In response and to prevent attainable government intervention, United Airlines spun off its Apollo software reservation system, which was then controlled by Covia.
- Galileo International was born when Covia gained Europe's Galileo and unified it with the Apollo systems in 1992. The Apollo Software GDS was utilized by United Airlines till March three, 2012, when it switched to shares, a system utilized by its former Continental Airlines subsidiary.
- Apollo Software remains utilized by Galileo international agency customers in several countries just like the United States, Canada, Mexico, and Japan.
- Travel agencies historically relied on Apollo GDS for services, products, and rates in order to provide travel-related services to the top customers.
- Thus, an Apollo GDS can link services, rates, and bookings consolidating products and services across travel sectors: i.e., airline reservations.

- Primary customers of Apollo GDS are travel agents (both online and office-based) to form the reservation on numerous reservation systems run by the vendors.
- GDS possesses no inventory; the inventory is held on the vendor's reservation system itself. Our Apollo GDS system will have a real-time link to the vendor's information. When an agency desires a booking on the service provided by a selected airline company, the Apollo GDS system will send the request to the appropriate airline's computer reservations system.
- The prototype of GDS within the travel sector is often seen within the 1950s because of the ancient legacy business model that inter-operated between the airline vendors. Computer reservation systems (CRS), at the starting stage, was utilized by the airline companies as an automatic booking system, but later, travel agents were given access.
- Around 1980, connection to completely different travel suppliers in a very single platform, CRS helps us doing that, CRS enabled travel agents to attach to completely different travel suppliers in a very single system.

- At this time, in addition to flights were also enclosed. CRS claimed much strength by the late 80s being thus useful to each supplier and distributor.
- In the 90s, the airline computerized reservation systems were transformed into global distribution systems (GDS). GDS has increased a great deal from airline alliances and has become independent business units with product internationalization and introduction of a new product, mainly airlines.
- Our Apollo software is one such GDS that is widely used by the travel industry all around the world for your travel bookings. Whether you want to book airline tickets or do hotel bookings, Apollo software will do this for you. You can store and retrieve information and conduct transactions related to air travel or different tasks.
- If you have a travel company and are looking for companies that can develop Apollo software for your business then FlightsLogic is that the best solution you are trying to find.

- Apollo GDS software suppliers started commerce the inventories through the mode of XMLs /APIs. Using the airline XML – travel firms could hook up with GDS systems to see online availability and do the bookings.
- It also helped the travel agents to combine the XMLs (GDS system) on their own website in the form of API's to get the airline booking system usable for the B2C users.
- Integrating Apollo software permits the condition of inventory information (availability/pricing) mechanically. All the agents and B2C users get equivalent seamless information.
- As the travel business is dynamic to the online mode from the offline mode, travel agents have started requesting white label software / white label solutions from the airline suppliers and Apollo software suppliers to sell the airline/flight tickets with their own brands, logo and contact information.

- All the customers, clients and corporates across the world can view and book a flight on a 24 X 7 basis. Our Apollo software is broadly used to widen the market reach. A unique global distribution system is connected through several B2B, B2C, B2E, and B2B2C websites.
- Apollo software system is an online integrated project and contact management software. Our Apollo software system permits users to range tasks, organize projects, and keep the team on an equivalent page with only a browser and a web connection.
- Our Apollo GDS is a project based on cloud and communication management solution that is developed by Applicom that helps customers manage direct and skilled plans by reminding them of appointments and deadlines. It links up the management of personal tasks, calendars, contacts, and projects.
