GDS Travel Software

Email ID: contact@flightslogic.com

- Whether you need Amadeus GDS API, Sabre GDS API, or Travelport GDS API, FlightsLogic is your one-stop shop for all your GDS reservation system needs.
- FlightsLogic is a prominent GDS travel software company that creates and deploys best-in-class travel booking systems using travel APIs and GDS connections. We provide comprehensive GDS software solutions that include user modules (such as B2C, B2B, B2E, and B2B2C), service modules (such as flights, hotels, vehicles, transfers, sightseeing, VISA, and cruise), and backend admin modules.
- Our GDS Integration also gives visit agents, customers, and travel agencies access to data. Using this information, you may evaluate the rates, booking schedule, services, and inventory data to help you choose the best option for your trip when purchasing a ticket online.

- Travel GDS systems support transactions between travel agencies, DMCs, corporate agencies, and providers like airlines, hotels, transportation providers, cruise lines, and sightseeing businesses.
- We are one of the leading GDS integration suppliers, offering B2B, B2C, and Admin modules. We can also help you book flights, vehicles, hotels, and vacation packages in real time. GDS makes it easier to give package offerings as it brings together several service providers in an easy-to-use interface.
- Travel companies may easily customize and update packages to meet the specific needs of their consumers. Furthermore, agents may provide higher rates, increasing client satisfaction.
- We collaborate with global startups and businesses of all sizes to develop, improve, and grow products across platforms by exploiting revolutionary technologies in GDS API.

Flightslogic
Transforming Travel Technology

Why GDS Travel Software is Important for the Travel Industry?

- The Global Distribution System (GDS) is the primary reservation tool for travel agents. The Global Distribution System (GDS) is a network that allows travel agencies and their customers to access travel data, search for and compare reservation options, and book travel. GDS software manages all online transactions between suppliers and travel agencies and has proven to be one of the most effective tools for traveling groups.
- Travel GDS platforms aggregate inventory, availability, price, and other information and provide access to agents, OTAs, IBEs, and other channels. With GDS, operators may provide comparative data on travel expenditures for their clients.
- GDS Travel Software provides a single point of contact for integrated travel inventory and pricing. Millions of agents have access to the data and are processing bookings for their end clients at any time.

Features of GDS Travel Software

- Global Distribution System is an exposure of the worldwide Inventory of airlines and hotels.
- It has access to both B2B and B2C
- Purchase preferred seats and other services from GDS.
- You can expand your coverage easily with travel agents and agencies through GDS.
- There will be a Single window Interface and easy to connect.
- GDS targets all travel agencies and agents effectively with the best fares and commissions.
- It is easy to maintain information with GDS.
- An opening inventory to new distribution channels

How to integrate GDS travel software on your booking website?

- As a leading GDS integration company, we work with GDS systems and low-cost airlines to provide our clients with a comprehensive flight booking system. Our professionals provide best-in-class GDS travel software development and integration services, allowing you to easily manage and expand your travel business while reducing costs and increasing ROI.
- Choose our best travel software development solutions to boost the efficiency of your internal operations with GDS integration for a customized booking engine. FlightsLogic has designed and developed a B2B and B2C travel portal, a data-driven dashboard, a collaborative trip planner, and an advanced booking and reservation system.

- We build online booking engines and Central Reservation Systems (CRS) for direct trip booking, passenger tracking, confirmation/cancellation, and other services that integrate seamlessly with GDSs, OBTs, extranets, and open distribution channels. GDS integration also helps travel agents generate income and manage their businesses.
- IATA accreditation is one of the vital factors for integrating travel GDS on your website. If you work for an IATA agency, you may utilize it with any leading GDS travel systems, such as Amadeus, Travelport, and Sabre.
- Hire a skilled travel portal development company to incorporate the GDS travel software on your booking platform after you have received your test credentials. Once the integration is complete, you may proceed with live certification to make it operational.
- GDS portal integration makes your availability and prices apparent to leisure and corporate travel companies worldwide.

- GDS bookings have a high value and are an integral aspect of an independent hotel's distribution strategy. It is a computerized network system that offers real-time data to businesses such as airlines, hotels, vehicle rental firms, and travel agents.
- Tour operators utilize GDS systems such as Amadeus, Sabre, and Travelport to obtain the lowest deals on flights and lodgings all around the globe. By using the GDS distribution platform, you may tap into the long-established travel sector to market your accommodation on your behalf.
- Leading GDS Software In The Travel Industry

Amadeus

- Amadeus GDS integration is a complete GDS Flight API integration that assists travel agencies in offering attractive rates and commissions on flights, hotels, transfers, and sightseeing. Amadeus GDS gathers all travelers in one location with a core to increase capital.

- Amadeus GDS, in turn, reduces costs, pays commissions, and provides a better global experience. Amadeus GDS aids in the delivery of services to obtain the desired outcomes from clients.
- Its API connection provides the best search results. Amadeus GDS is a flexible platform that leverages intelligence through data, structures, and unique interfaces. The global distribution system welcomes new techniques of enticing travelers by allowing them to compare flight, hotel, destination services, ground transportation, and insurance pricing and packages.

Travelport

- Travelport is a global distribution system (GDS) leader in airline merchandising, hotel aggregation, car rental, travel commerce, transfers, and B2B solutions.

- FlightsLogic developers ensure the Travelport technologies interface seamlessly with your company's unique software, connecting the largest tourism providers with online and offline travel customers to support travel commerce via their B2B travel platform.
- We offer custom integrations with Travelport systems such as Travelport Universal API, Travelport Universal Profile, Travelport Universal Policy, Travelport Universal Record, Travelport Galileo, Travelport Apollo, and others.

Galileo

- Galileo is a Global distribution system owned by Travelport. In addition to airline reservations, the Galileo CRS is also used to book train travel, cruises, car rentals, and hotel rooms. Galileo is a member of the International Air Transport Association, the Open Travel Alliance, and SITA.

- Its primary business is to provide electronic global distribution services to the travel industry through computerized reservation systems, cutting-edge products, and innovative web-based solutions.
- Galileo GDS is connected to 650,000 hotel properties in 180 countries worldwide. Furthermore, independent hoteliers may easily connect to global travel management organizations and ensure that their guests receive convenient packages by utilizing the Galileo XML API.

Worldspan

- Worldspan is a Travelport GDS that provides electronic distribution of travel information, products, and connectivity. It enables the travel agency to steadily expand its business while providing prompt service to its customers. Worldspan travel software serves as a single source for travel deals and data from around the world.

- Worldspan travel has greatly benefited travel agencies and travel companies. The integration of Worldspan travel software allows travel agents to improve the consumer experience by giving information such as pricing, inventories, discounts, rooms, and descriptions.
- Implementing Worldspan GDS software in the travel agency software business helps in reducing the implementation cost.

Sabre

- Sabre is a data-driven system and a preferred technology for growing hotel and airline businesses. Over 400,000 travel agencies use GDS software to get tickets, reservations, availability, pricing, and schedule information. The GDS software can process over a million travel booking transactions.
- Using Sabre GDS software, travel agencies can get real-time price and inventory information.

- To increase efficiency, decrease costs, and improve customer experiences, we provide custom-tailored Sabre Software Solutions that include advanced feature implementation, API integration, and expert-level GDS development services.
- We develop Sabre travel portals for travel management companies, online travel agencies (OTAs), and travel corporations, with specific features that make booking flights, vehicles, hotels, cruises, trains, and other services simple.

Reasons to choose us:

- Greater Audience Reach
- Easy and Smooth Connection
- Better Administrative Control
- Improved ROI
- Comprehensive Analytics
- Real-time Content and Updates
- Complete Identification

How does FlightsLogic GDS Travel Software help you?

- FlightsLogic is a reputable travel software development company with skilled developers capable of developing and deploying travel APIs and GDS solutions. In addition to the dashboard interface, our native mobile developers provide Android and iOS modules for faster operations.
- Our expert GDS software developers have extensive expertise in creating web services such as bespoke websites, online booking engines, front-office systems for online travel agencies, and self-booking tools.
- Travel agents and agencies may now utilize GDS (Global Distribution Systems) to find and compare the best available travel, bookings, and pricing for their clients. By focusing on technological speed and innovation, we ensure excellent deliverables and rapid turnaround to build and implement scalable online travel software systems and booking engines.

- FlightsLogic is a leading service provider that specializes in user experience design and cutting-edge technology. We provide multilingual assistance, credit deposits, booking, reporting, SMS gateway, fare caching, business intelligence reports, direct contracts, transactional reports, redistribution API, and multi-scale channels to help you increase your revenues and expand your digital ideas.
- GDS also helps travel agencies generate revenue and manage their operations. We strive to give travelers and agents the best possible experience by providing them with all available commissions, bargains, and offers on their reservations.
- We have vast experience creating internet booking engines (IBE) and integrating multiple GDS features for various airline operators. Our expertise and experience in designing, implementing, and connecting different types of IBEs with leading GDS have established us as a global leader in this service sector.

- FlightsLogic is a one-stop shop for domestic and international clients, offering a wide range of travel products and services from the world's largest GDS. Travel and hospitality organizations may use the Global Distribution System's single gateway to market their products to a broad range of online travel agents and enterprise travel bookers.
- Travel and hospitality companies may utilize the Global Distribution System's single gateway to market their products to a wide range of online travel agents and business travel bookers.

Our Solutions

Flight Booking Engine

- This module communicates with the airline GDS and provides real-time flight inventory, availability, and price. B2C / B2B users can book a flight and generate a PNR. Our best GDS API integration aids the airline CRS in meeting the worldwide passenger goal.

Hotel Booking Engine

- This module connects to hotel GDS and provides real-time hotel inventory, room availability, and per-night pricing. Hotels may be booked online by B2C individuals and B2B agencies.
- Our Hotel Booking Engine is an excellent solution for travel companies and hotels that want to increase their exposure to provide the most effective and favourable search results to passengers. We can help you if you require a hotel booking website, a customized booking solution, or third-party XML and JSON API access.

Car Rentals

- We design and build comprehensive car booking engines for taxi businesses and travel agencies based on their specific needs. If you already have a car rental website and a Car rental XML API, our staff can help you integrate them. Integrating a car rental API into your travel website not only improves the engagement of your Car Booking Engine but also explains the travel portal.
