CRS System

Email ID: contact@flightslogic.com

What is CRS System?

- The CRS System is the most used technological tool in the tourism industry. It is simply an electronic system designed to promote sales and provide fast and accurate information on product and service availability, price, and reservations. Central reservation systems can help you establish customer loyalty and stay competitive by providing superior services.
- This system collects data and aids in retrieving it while making bookings or reservations for guests. It enables the Hotel Reservation System to access the GDS Global Distribution System and many other internet distribution systems and online web portals/pages or webpages from a single window.

List of basic functions included in the Computer Reservation System:

- Displays travel services with prices and images
- Facilitates customer data management
- Passenger or Guest Name Records
- Tariff quote and ticketing, depending on the services provided
- Allows you to manage booking refunds and cancellations
- User-friendly reservation system
- Customer data management
- It is an easy-to-use system that facilitates email notification and payment gateway integration
- Booking and inventory management are enabled

The main functions of a CRS System in the Travel Industry.

- CRSs are designed and developed to eliminate geographical barriers between air carriers and their customers. These distribution systems perform their functions by connecting with airlines' passenger processing systems and interacting with passenger contact points such as the airline's website, travel agencies, and other third-party booking platforms.
- The main benefit of having a CRSs system is that it connects the individual hotel with the GDS and makes the hotels visible among the various travel agents all over the globe.
- Computer Reservation Systems now assist agents and travel companies in collecting and distributing information about tourist products and services.
- Third-party travel agents rely heavily on computer reservation systems (CRS). Agents using CRS can get flight information via GDS interfaced with CRS or directly from meta-search engines.

- Airlines that use a CRS system that interacts with their websites can benefit from commission-free reservations. It also supports several currencies and payment methods, resulting in a better user experience.
- FlightsLogic is a full-service travel reservation system that integrates back office, internet booking, and partner booking. Because it is cloud-based software, you may access it from anywhere at any time. Our developers have extensive experience in the travel industry, specializing in GDS integrations, Central Reservation System (CRS) development, and so much more.
- We develop online booking engines and Central Reservation Systems (CRS) that are easily linked with GDSs, OBTs, extranets, and open distribution channels. One of the most extensively utilized tools in the travel and tourism industry is the computer reservation system (CRS). It has completely transformed the sector.

Here are some of the benefits of CRS

- All the services-related customer information such as Passenger Name Record (PNR) or Guest Name Record (GNR) is recorded
- Invoicing, accounting, customer, and quota management are possible
- High-speed network of information infrastructure
- Fare quote, ticketing, and voucher-generating process
- The system can also store customer-related information such as all the services provided to a certain customer, type of payment, service information, etc
- CRS are web-based applications that save a lot of time on administration work
- Interfaces with technologies such as Amadeus, Travelport, and APIs/XMLs
- Suitable for B2B and B2C business models

Types of Travel CRS System

Airline CRS System

- Airline CRS is a web-based travel portal that assists in creating flight schedules, monitoring seat availability, and making bookings via API. The Airline Reservation System is a vital tool for airlines since it handles bookings, fares/tariffs, and keeps real-time track of booking data. Furthermore, by integrating B2B and B2C interfaces, airlines may increase customer engagement and brand exposure.
- FlightsLogic is an award-winning airline reservation system company that works with airline companies, GDS systems, and flight consolidators worldwide. Our CRS helps you to increase booking conversion through unique offers and upselling to maximize revenue generation for your business.

Mentioned below are a few features of the airline reservation system:

- One-way and roundtrip
- Booking from Chartered flights, LLCs, and international flights
- Reservation and inventory management
- Multi-currency and multi-language support
- Making a payment with a secure payment gateway
- Mobile-friendly and unique design
- Simplified search option
- Post-booking management
- Providing real-time updates on seat availability
- A cloud-based system enabling operation through smartphone or Tablet

Hotel CRS System

- A hotel central reservation system is also known as a Hotel CRS. It's a computerized system that distributes and maintains information on resorts, hotels, and other available lodging alternatives. Hotel CRS assists travel agencies in organizing and managing their sales and online marketing by enabling them to submit their room pricing and availability for viewing through their sales channels.
- As a leading hotel booking development company, we have vast expertise in XML integration with companies such as Kuoni, GTA, Tourico, Hotelbeds, Special Tours, Travco, HotelsPro, Path Finder, and Versys. Our hotel booking engine is a robust, feature-rich, and highly reliable web-based OTA solution for the world's best travel companies.

Flightslogic
Transforming Travel Technology

- Improves guest reservation
- Automate the entire booking process
- Save your time and reduces the cost

Our cruise booking system includes a vast number of cruise line, cruise ships, cabin descriptions, and links to media files, rich content such as cabin images, ship images, and deck plan to aid the shipping process.

Features of Cruise CRS

- Direct access to real-time inventory and low competitive rates
- Deck plans and cabin layout was chosen as per requirements
- Multiple currency support
- Deck map with sitting arrangement and availability details with graphical presentation
- Special deals and seasonal offerings presentation
- Complete itinerary and destination details
- Travel tips with driving details
- A customized look and feel
- Online support & ticket system

How can FlightsLogic CRS System improve your business?

- FlightsLogic central reservation systems connect your room inventory to multiple online travel agencies and global distribution platforms, allowing you to reach clients, agents, and travel management companies worldwide quickly and easily.
- Whether you run a chain of hotels or a single facility, our CRS System can help you boost operational efficiencies and maximize your distribution channels. Integrating CRS software will allow you to work with a broader range of distributors, adjust rates based on market conditions, streamline all booking processes, and provide excellent customer service.
- Our expert team of developers can assist you in developing online booking engines and Central Reservation Systems (CRS) for direct travel booking, passenger tracking, confirmation/cancellations, and other services, all of which can be seamlessly integrated with GDS systems, OBTs, extranets, and open distribution channels.

- We provide the best travel portal solution depending on the needs of the travel industry. Our professionals are skilled in travel portal development, Web Travel Portal/Travel Website Development, Website Designing, B2C, B2B Travel Portal/Booking Engine, Third Party Travel API Integration (Hotel, Flight, Tour Package, Car Rental, and Transfer), Payment Gateway Integration, and Search Engine Optimization.
- FlightsLogic is the best platform for ensuring travel business growth and successfully generating more business through travel website development. We can assist businesses with online booking and distribution platforms, travel and hospitality software development, hotel booking software, pricing comparison tools, and other services.
- We can add features like price comparison tools, dynamic pricing engines, travel packages, transfer management, insurance choices, and mobile ticketing to your Travel Booking software. A central reservation system (CRS) will streamline your revenue and grow your bottom line.

- Our Central Reservation System (CRS) is designed to help small-larger-scale accommodation operators consolidate and manage reservations across multiple properties. With our CRS, you can consolidate your entire booking process and eliminate the need to operate a separate Booking Engine for each of your property locations.
- CRS saves both clients and service providers time and resources, making the booking process more efficient. Our industry-leading software uses cutting-edge technology to streamline operations, improve efficiency, and enhance guest experiences, with a proven track record of boosting bookings and lowering operating costs for multi-property owners.
- Online reservation systems not only assist organizations in entirely automating different business procedures but also in improving process management and enabling a faster reporting process.
