Online Booking System Software

Email ID: contact@flightslogic.com

Online Booking System Software to Manage and Grow Your Travel Business

- An online booking system is a software solution that allows potential consumers to reserve and pay for a tour or service via your website or social media using various devices. Your consumers may use your online booking service at any time no matter where they are.
- A booking system assists you in running your business by simplifying and automating numerous procedures. It automates and optimizes day-to-day operations such as reservations, scheduling, and payments, as well as automatic reminders, staff management, and promoting your services.
- Using booking software to automate these business procedures saves time and increases productivity, enabling you to focus more on your offerings, client connections, and business growth.

- A booking system customized to your needs can help simplify and improve client service while also allowing you to monitor and analyze workload by enhancing procedures and operations.
- FlightsLogic offers the best online reservation system that can be customized for any business. Our developers have built Central Reservations Systems (CRS) for direct booking, inventory management, user profile building, confirmation and cancellation modules, and inventory blocking for individuals, organizations, and corporations.
- Our bespoke online booking engines manage a wide range of POS systems, including online booking via OTAs, affiliate networks, and direct bookings via Extranets. We can add features like price comparison tools, dynamic pricing engines, travel packages, transfer management, insurance choices, and mobile ticketing to your Travel Booking software.

- Being the leading travel software development company, we provide the best travel agency software. The software assists inbound and outbound tour operators in automating sales, integrating operations, and ensuring that finances and marketing run smoothly.
- Our developed Travel Booking Engine can provide a complete solution for B2C, B2B, B2B2B, B2B2C, BackOffice, CMS, Extranet / Negotiated fare management, MIS data in the form of graphs, and export in various formats.
- The powerful software makes it simple for agencies, tour operators, and other businesses to process bookings and design an outstanding itinerary. You can also utilize the software to provide package customization options for your customers.

Delivering a One-Stop Solution for all your Booking and Reservation Needs

- FlightsLogic is a well-known travel technology company that offers high-quality online booking software solutions to the travel industry. Our goal is to assist travel companies in attracting more consumers, increasing income, and expanding brand reach. Travel Booking Engines help travel companies upgrade their back-office and client-facing roles to streamline their company processes, increase revenue streams, and improve their client service experience.
- We provide consultancy and development services for all elements of B2C and B2B travel portal development, as well as travel API integration for flight, hotel, vacation package, bus, vehicle, cruise, and insurance reservations. We offer white-label solutions for businesses that require the development of travel websites and trip-planning applications.

Flightslogic
Transforming Travel Technology

- We develop online booking software for travel agencies and tour operators. It is online reservation software that is tied to user-centric activities that can then be used for marketing and consumer behavior analytics. The booking system software also simplifies the management of various business models, such as adding a marketplace or engaging with B2C or B2B clients.
- With our technical solutions, we support travel businesses in providing smooth and hassle-free services to their consumers. Our advanced online booking system integrates back office, B2B booking, and B2B booking system. Because it is cloud-based software, you may access it from anywhere at any time.
- Our travel software services for tour operators, travel agencies, DMCs, aggregators, booking portals, and suppliers such as hotels and airlines include a comprehensive range of solutions ranging from online reservations to back-office automation.

- Our team works with you to create online travel solutions and booking engines. We provide digital solutions to help you optimize your front- and back-office operations, improve day-to-day workflows, and retain visitor engagement.
- We provide web-based Travel Agency Software that benefits any travel website, including hotels, resorts, airlines, and rental vehicles. Travel software is intended and built for Travel Operators and Inbound Tour Operators who make reservations for travelers. Our flexible Online Travel Booking Engine is a collection of innovative solutions that help travel agencies, tour operators, airlines, and hotels grow and accomplish their goals.
- Our solution is available in multiple currencies and languages (as per client requirements).

- specialize in offering B2B / B2C travel software, travel CRM, accounting software, vehicle rental software, and mobility solutions to global travel & hospitality organizations. We work with prominent travel aggregators, GDSs, and DMCs.
- We offer travel website development services to organizations, allowing them to create a fully functional online travel booking website that surpasses customer requirements. Our award-winning online booking system software provides full-service solutions for online travel agencies, hotels, vacation package sites, and other enterprises.
- Our primary goal is to simplify travel companies' procedures and ensure that all data is accurate and secure. We provide a complete travel management system for corporate agencies, DMCs, B2B and B2C agencies, tour operators, transfer companies, and others.

Our online booking system software can accomplish the following tasks:

- **Catalog definition –** Input all your products (accommodation, flights, activities, transfers, rent-a-car, vessels, cruises) and create complex travel packages or groups. Book travel products and flights directly – From third-party suppliers and GDS systems.
- **Tour management –** Create tours by entering input services and defining selling prices.
- **Automated supplier ordering –** Communication with your suppliers is completely automated.
- **Online booking B2C –** Publish your travel products online
- **Partner booking –** Reservation system to allow your partners to book easier.
- **Reservation management –** Create reservations, enter customers, and track payments.
- **Document creation –** Create invoices, vouchers, and receipts.

As a leading online travel booking software company, we develop the following for our global clients:

B2C Booking System

- FlightsLogic is a web-based end-to-end travel operation software that provides tour operators with a complete online booking system with a mid and back-office for travel reservations, flight reservations, operations, and contracts.
- Our B2C offers clients the unique flexibility to make online bookings, generate their own booking vouchers and airline tickets, examine the history of bookings and payments, and send cancellation or alteration requests at any time and from any location.

Flightslogic
Transforming Travel Technology

B2B Booking System

- We enable you to sell content through resellers under B2B Travel Software with varying conditions and charges based on partner profiles and Consolidators, wholesalers, and host agencies of all types and sizes.
- Our B2B travel booking system comprises modules for flights, hotels, transfers, excursions, and packages for travel agencies/agents.
- Using the B2B module, you may sell your own contractual rates and third-party XML supplier inventories that provide the best prices.
- A B2B booking engine may help you extend your business globally through a sub-agent network, which immediately boosts your business income.

Flightslogic
Transforming Travel Technology

Flight Booking System

- FlightsLogic provides flight booking engine solutions and a fully integrated Airline Reservation System with GDS such as Travelport, Galileo, Amadeus, Sabre, and Wordspan.
- We are merging your GDS and non-GDS information onto a single booking tool platform.
- Flight Booking Engine is about more than simply selling more tickets; it is also about enhancing the company's brand value to optimize the average value per transaction from new and returning customers.
- And our flight booking engine with responsive designs gives our customers all the essential features.

Hotel Booking System

- FlightsLogic is a cloud-based program that allows travel agencies to upload their own contracted hotels and hotel partners to register hotels, where hotels will manage various distribution channels such as B2C/B2B/B2B2C. We offer a hotel reservation system linked to over 50+ XML providers and a hotel extranet to manage its contracted hotels.

Car Booking System

- FlightsLogic offers a customizable car booking system for car rental firms and car rental agencies. Managing reservations is quite simple by utilizing the Car Booking Engine, tracking the availability of different vehicles, maintaining vehicles in and out, etc. We have vast experience creating and implementing customized car rental solutions. Individual car rental companies may easily connect with global customers and provide seamless and synchronized services to their clients.

Flightslogic
Transforming Travel Technology

XML Integration

- We offer a SOAP-based solution for connecting third-party web services/XML APIs/JSON. With top travel content suppliers, we provide XML API implementation services for numerous services under flight/hotel/packages. XML/API integration has become a critical part of every online travel agency, allowing access to live inventories for every aspect of travel and tourism, from hotel rooms to flight tickets, tours, and car rentals, among other things.

Backoffice / Midoffice

- FlightsLogic is a multi-channel sales channel that helps Travel Agents, Corporate Accounts, end-consumers, and other affiliates to promote their business with their own customized website and mobile app.

- It is a suite of the most advanced tools that enable you to create your own travel business rules, automate your procedures, and manage your workflow. You can control your reservations in real-time, create and maintain client and supplier profiles, design and manage mark-ups, business rules, and different kinds of payments, generate bills, and run reports.

Package Booking Engine

- FlightsLogic is a web-based package booking engine. Our package booking engine provides a quick and easy reservation experience that requires less effort to book the appropriate package online. Our solution can run on PCs, mobile, and tablets.
- The package booking engine allows you to mix various vacation properties such as flights/hotels/cars/transfers/excursions. In the same system, you may create packages for GIT or FIT, and users can book based on their needs.

Why is online booking system software important?

- An online booking system is a must-have tool for travel companies and organizations. The online booking reservation system has significantly transformed the travel booking procedure. A rising number of customers are turning to online booking/GDS systems because of their ease of use and speedy confirmation.
- We integrated real-time reservation software, booking systems, web application, accounting, and administration into a single integrated solution. It saves duplication of effort and ensures that all information is valid and up to date. An online booking system can make the booking process easier for prospective customers, converting more visitors into guests and generating revenue.
- The use of online booking software will save you time and cost by reducing paperwork expenditures and minimizing booking costs.

- An effective booking software will have features such as an integrated calendar, a mobile interface, automatic alerts (message/email), online payment choices, channel management, and reporting options.
- FlightsLogic provides proven standardized technologies designed to help tour companies. Our online booking system includes advanced features such as booking management, multiple payment options, quote management, third-party supplier integration, and reporting to handle tour business operations smoothly and elevate business in the travel industry.
- Our customized online booking engines support a range of point-of-sale systems, including online booking via OTAs, affiliate networks, and direct bookings via Extranets. We can add features like price comparison tools, dynamic pricing engines, travel packages, transfer management, insurance choices, and mobile ticketing to your Travel Booking software.

Benefits of Online Booking System
